

WolfTrack 6.0

- Your one-stop shop for smooth efficiency and organisation when looking for internships and full-time employment is WolfTrack6.0.
- With the help of this advanced online platform, you may expedite the application process and monitor each stage of your career path. With WolfTrack6.0, you can easily manage applications, deadlines, and important papers to stay on track in your career.
- It provides structure and accuracy without compromising flair and usability, making it your compass in the cutthroat job market.
- WolfTrack6.0 guides you through professional opportunities with elegance and convenience. Among the various tools we provide are tracking your application and suggesting changes to your resume.
- WolfTrack 6.0 is divided into two parts: Admin and Student

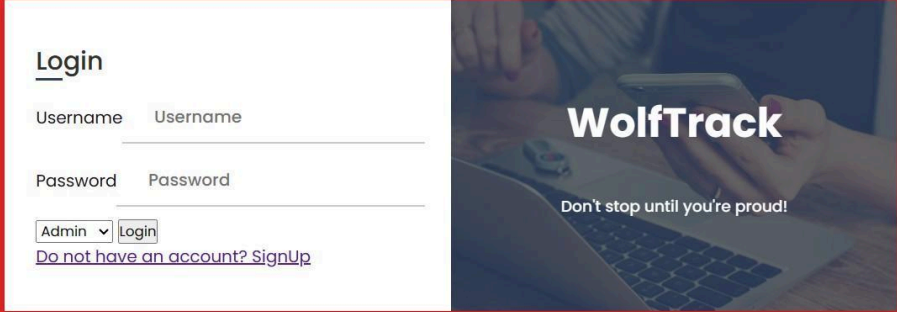

Let us brief the functionality of **Student** first:

When the user opens the portal, they can either log in or sign up.

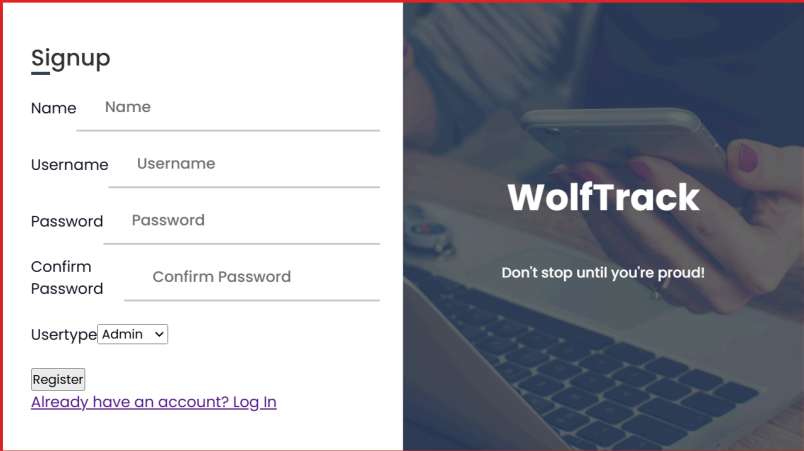

If the user selects Login:

They need to enter the required credentials, making sure the constraints are met.

The screenshot shows the 'Login' page of the WolfTrack application. The page has a white background with a red border. On the left, there is a login form with the following fields: 'Username' (labeled 'Username'), 'Password' (labeled 'Password'), and a 'Login' button. Below the password field, there is a dropdown menu for 'Admin' and a link 'Do not have an account? Sign Up'. On the right, there is a dark blue banner with the 'WolfTrack' logo and the text 'Don't stop until you're proud!'.

If the user does not already have an account, then they need to sign up. We have created the confirm password field which validates the password. When the user is creating an account they have the option to select the type of user. They can choose either admin or student user type.

The screenshot shows the 'Signup' page of the WolfTrack application. The page has a white background with a red border. On the left, there is a signup form with the following fields: 'Name' (labeled 'Name'), 'Username' (labeled 'Username'), 'Password' (labeled 'Password'), 'Confirm Password' (labeled 'Confirm Password'), and a dropdown menu for 'Usertype' with 'Admin' selected. Below the dropdown, there is a 'Register' button and a link 'Already have an account? Log In'. On the right, there is a dark blue banner with the 'WolfTrack' logo and the text 'Don't stop until you're proud!'.

The major changes were made in the signup page in Wolftrack 6.0

1. We added length constraints to all the fields. Length validators were present for the fields on the login page but not on the signup page, so we added the corresponding length validators for the fields on the signup page as well.

The screenshot shows the 'Signup' form for 'WolfTrack'. The form has a white background and is set against a red border. On the right, there is a background image of a person's hands holding a smartphone over a laptop keyboard, with the text 'WolfTrack' and 'Don't stop until you're proud!' overlaid. The form fields are as follows: 'Name' with the value 'sd', 'Username' with the value 'sd', 'Confirm Password' with two dots, and 'Usertype' set to 'Admin'. A yellow error message box with an exclamation mark icon is positioned over the 'Username' field, stating: 'Please lengthen this text to 4 characters or more (you are currently using 2 characters)'. At the bottom of the form, there is a 'Register' button and a link that says 'Already have an account? Log In'.

2. Added an error pop-up when an already registered username is used to register

This screenshot shows the 'Signup' form after a change. The 'Name' field now contains 'qwert'. The 'Username' field also contains 'qwert', and a red error message box appears above it with the text 'Username already exists'. The 'Password' field now contains 'Password', and the 'Confirm Password' field contains 'Confirm Password'. The 'Usertype' dropdown is now set to 'Student'. The 'Register' button and the 'Log In' link remain at the bottom of the form. The background image and branding on the right side of the form are identical to the previous screenshot.

3. Added Regex validation to the password field

Signup

Password should contain atleast one letter, number and special character

Name

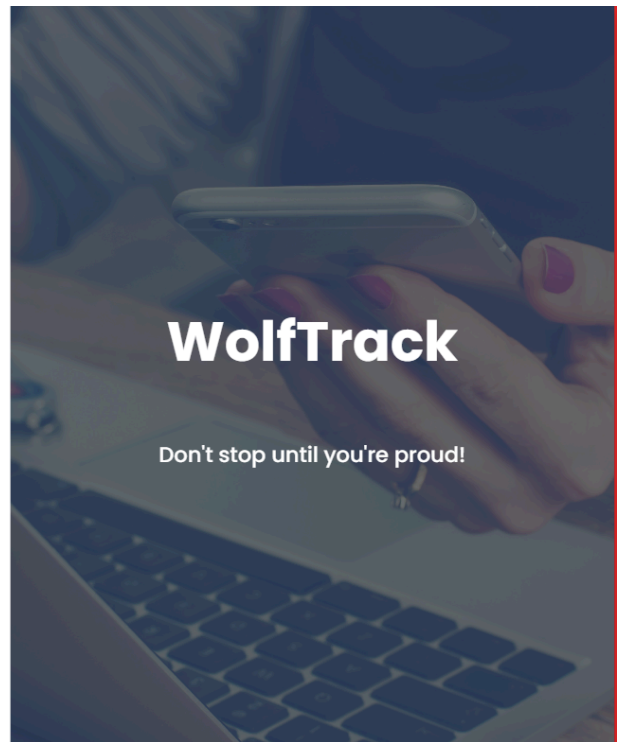

Username

Password

Confirm Password

Usertype

[Already have an account? Log In](#)

4. Added an error pop-up if the confirm password is not the same as the password field

Signup

Passwords do not match

Name

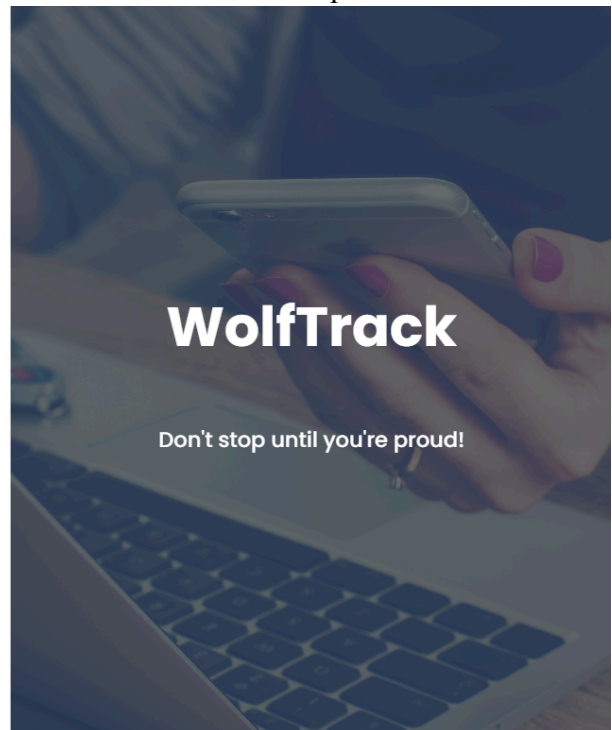

Username

Password

Confirm Password

Usertype

[Already have an account? Log In](#)

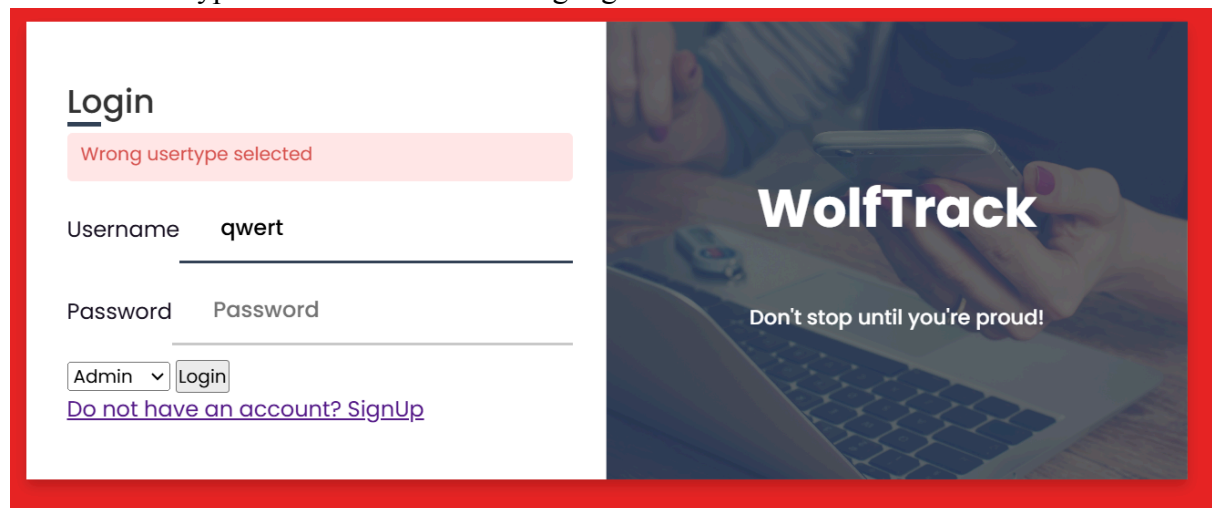

Once sign up is done, we can log in

The screenshot shows the WolfTrack login interface. On the left, a white login form is displayed with the title "Login". It contains fields for "Username" (filled with "testse510") and "Password" (filled with dots). Below these fields is a dropdown menu for user type, currently set to "Admin", with a "Login" button next to it. A "Student" option is visible in the dropdown. A link "Do not have an account? SignUp" is also present. On the right, a dark blue banner features the "WolfTrack" logo and the slogan "Don't stop until you're proud!" over a background image of hands using a laptop and a smartphone.

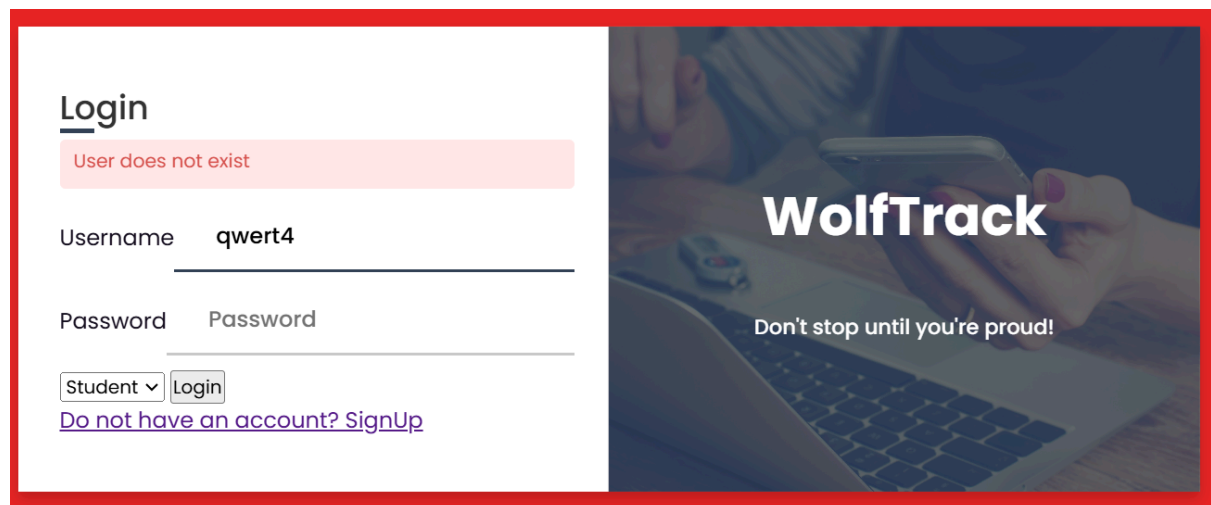

Also, we have added certain validation conditions on the login page as well

1. Before we used to be able to sign in even if we had selected the wrong user type, now we have added user-type validation as well during login.

This screenshot shows the same WolfTrack login page, but with a validation error. A red message box at the top of the form states "Wrong usertype selected". The "Username" field now contains "qwert" and the "Password" field contains the text "Password". The user type dropdown remains set to "Admin". The "Login" button and the "SignUp" link are still visible. The right-side banner with the "WolfTrack" logo and slogan remains unchanged.

2. Added a "user does not exist" error pop-up for when an invalid username is entered.

Once, you have logged in successfully, you see a page like below and has the following functionalities:

1. Set Target: Set your target for the number of applications for the day
2. Analyze Resume: Once you have uploaded your resume, this functionality will analyze your resume and give you a score.
3. Search Jobs Online: It prompts you to enter the position you are looking for and gives you a list of jobs that have openings currently available.
4. Skill Check: The Job Skill Extractor is a powerful tool designed to streamline the process of identifying essential skills from lengthy job descriptions. By analyzing the text, this tool efficiently extracts a list of required skills, allowing users to quickly highlight and focus on the skills necessary for the job.
5. Resume Suggestions: This functionality gives you an analysis of the resume you have provided.
6. Interview Prep: This is a new functionality added that gives the link to various resources to prepare for an interview, and also the user can download a few resources.
7. Comment and review: This is a new functionality added where users can give comments and feedback and even rate the overall experience of the website. They can also view the feedback and comments of others who have commented.
8. Contact our admin. This is a new functionality added where the user can send a message to the admin.
9. Add CV: In this section, you add your resume, which is useful for the analyze resume section and resume suggestions section.
10. Download CV: It helps you to download the resume you have uploaded any time you need it in the future.
11. Send Profile: You can send your resume to anyone by just entering the email address of that person.
12. Add New Job Application: This is the most important section of the portal, where you can maintain all your application details. It has the following fields:
 - Company
 - Location
 - Job Position
 - Salary
 - Status

You can edit any of these fields in the future and also delete any of them if you do not need them anymore.
